

BOREHOLE MICROMETER

30-60mm borehole diameter inspection tool

APPLICATIONS

Our newly designed micrometer is a mechanical device used to measure the diameter of a roof bolt hole along its length. The standard unit has a measurement range of 30 to 60mm and can be inserted up to a depth of 3 metres from the borehole opening. With a smooth pull-to-measure mechanism, measuring a borehole diameter has never been easier.

FEATURES

- Stainless steel body
- Replaceable brass slider
- Replaceable jaws
- Mine-tested for robustness
- Millimetre gradations on both sides of handle
- Highly flexible cable
